

Long-time CADKEY users speak out

"KeyCreator is so straightforward to use that even our operators on the shop floor who don't use CAD software on an everyday basis find it easy to maintain proficiency. The KeyCreator interface eliminates the need to be a certified expert as you must have with other higher-priced CAD systems."

**Scott Basilius, President
Basilius, Inc.**

"I can't afford to go back (to CADKEY). My work is getting done faster and more accurately with KeyCreator. With some of the new functionality, what would have taken me an hour has now been reduced to five minutes or so. And, with the direct translators, any of the files we get from our customers are easily translated to native files so everything is so much cleaner to work with."

**Tim Atkins, Engineering Manager
Bernard Mould**

"KeyCreator is the only tool we use all the time; we lease IDEAS when we need it occasionally; we have to use SDRC for Ford projects; but since 1992 CADKEY and now KeyCreator has been our design tool of choice."

**Jim O'Brien, President
O'Brien Engineered Products**

"KeyCreator has greatly improved the productivity of our organization. KeyCreator's ability to let us create surface models in 3D, rather than 2D, reduced the amount of time it takes us to create models. In turn, once the design is finalized and approved, we can quickly create surfaces for machining directly from KeyCreator."

**Greg Tilley, QHSE Manager / Naval Architect
Oceanic Consulting Corporation**

"Our reputation is based on a long history of manufacturing top-quality products and to do so we need a top-quality tool. That is why, when it was time to upgrade, KeyCreator was the obvious choice. We work on many very intricate and precise projects, and need to have a high degree of confidence in our software tools. Based on our long standing satisfaction with the company's products, selecting Kubotek's KeyCreator was a very easy choice."

**Chris Wright, Director of Design Engineering
Spitz, Inc.**

"KeyCreator can be used for both very simple and very complex modeling applications. The interface is much more intuitive than any competing products. The detailing and 2D drawing is far superior to what we see in other tools and there are so many features that we can use in both the 2D and 3D environments. You can trim one line to another line in both 2D and 3D. Being able to use a 2D feature in the 3D world makes modifications so much easier and saves a huge amount of time. This is all part of our Integrated Product Development process."

**Danna Mancini, Manager of Engineering Services
Anderson Power Products**

"KeyCreator gives us the flexibility we need when designing complex new products. With our recent Neptune Pumping System project, we needed to work with one of our sister companies and numerous suppliers. The ability to easily share KeyCreator designs made collaboration on the project effortless. Additionally, with KeyCreator, we are able to move quickly from the design to manufacturing stage with this complicated piece of equipment in under six months. Over two hundred drawings were developed for the manufacturing of this product as well as multiple pieces for marketing."

**Keith Coblentz, Systems Designer,
Kidde Fire Fighting, National Foam Division**
